Marijuana Use Is Not Safe While Pregnant

Did you know that marijuana:

- Makes it harder for your baby to grow.
- Can hurt your baby’s brain.
- Smoke can harm your baby.
- Stays in your breast milk over time.
What Can Happen to Your Baby

Marijuana Use During Pregnancy
- Marijuana passes to your baby through your placenta. This includes smoking and edibles.
- Can increase the chance for your baby to be born with low birth weight.
- Your child may have more problems with attention and learning if you used marijuana during pregnancy.

Marijuana Smoke Around Your Baby
- Breathing in marijuana smoke can harm your baby.
- May increase the chance for Sudden Infant Death Syndrome (SIDS).
- Dad and family members can also protect your baby from marijuana smoke.

Marijuana Use and Breastfeeding
- Causes the drug to be in your breast milk.
- Marijuana is stored in fat and is slowly released over time, meaning an infant could be exposed for a longer period of time.
- Breastfeeding mothers should avoid or reduce marijuana use.

What Can Happen To You
- You can become addicted.
- It can decrease your memory, learning, and attention.
- You increase your risk for breathing problems.

I didn’t know about all the harmful effects of marijuana use while I was pregnant. If I had known, I would not have exposed my kids. I know the learning problems my kids show now are because I smoked marijuana when I was pregnant with both of them.

- 26 year old, former marijuana user

If you have nausea, vomiting, or decreased appetite, talk to your prenatal doctor.

Some ways to help are:
- Eat small, frequent, healthy meals
- Get plenty of fresh air
- Acupressure bands, or C-Bands
- Try ginger snaps, root or tea
- Try vitamin B-6
